## EXPERIENCE

---

### Technical Operations Specialist

Recollective

Jul 2021 - Present

- Collaborated with other team leads and directors to ensure compliance with industry standards and best practices;
- Developed and deployed Apex classes, triggers, and Visualforce pages to help assist employees with their daily operations while in Salesforce i.e, built an Apex component to help mass update users inside a custom package added into our Salesforce production;
- Utilized SOQL and Excel to extract and analyze data for Object and Field relations within Salesforce;
- Implemented various Salesforce features such as workflows, validation rules, and approval processes;
- Built page layouts with Salesforce to help users get the most out of Salesforce technology.

### Cloud Computing Analyst Co-Op

Global Affairs Canada

Jan-Aug 2020

- Worked with cloud computing programs, set up Virtual Machines, and facilitated updates;
- Used Azure DevOps for my team to help with the project management i.e.m, Learnt and presented Kanban boards, set up Git repositories, and connected the Virtual Machines with Azure DevOps;
- Assisted the project leader in identifying, analyzing, and monitoring risks and issues;
- Worked with the analytics of virtual machines through Azure.
